

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1-32. (Canceled)

33. (New) An anhydrous pharmaceutical composition combining at least one active ingredient and a silicone agent comprising at least one organopolysiloxane elastomer and a thickening agent different from the silicone agent, said active ingredient being in a solubilized form in said composition.

34. (New) An anhydrous pharmaceutical composition combining at least one active ingredient and a silicone agent, said active ingredient being in a solubilized form in said composition, said silicone agent comprising at least one organopolysiloxane elastomer prepared by crosslinking reaction between :

- polysiloxanes (A) containing $\equiv\text{Si-H}$ groups represented by the compounds of formula $\text{R}^{14}_3\text{SiO}(\text{R}^{15}_2\text{SiO})_a(\text{R}^{16}\text{HSiO})_b\text{SiR}^{14}_3$ here denoted as type A^1 , and compounds of formula $\text{HR}^{14}_2\text{SiO}(\text{R}^{15}_2\text{SiO})_c\text{SiR}^{14}_2\text{H}$ or of formula $\text{HR}^{14}_2\text{SiO}(\text{R}^{15}_2\text{SiO})_a(\text{R}^{16}\text{HSiO})_b\text{SiR}^{14}_2\text{H}$ here denoted as type A^2 , in these formulae, R^{14} , R^{15} and R^{16} are alkyl groups having from 1 to 6 carbon atoms, a is an integer ranging from 0 to 250, b is in integer ranging from 1 to 250, and c is an integer ranging from 0 to 250, the molar ratio of the compounds A^2 : A^1 being from 0 to 20,
- an alpha, omega-diene (B) which is a compound of formula $\text{CH}_2=\text{CH}(\text{CH}_2)_d\text{CH}=\text{CH}_2$ in which d is an integer ranging from 1 to 20, in the presence of a catalyst, and
- a low molecular weight linear or cyclic polysiloxane (C), being a cyclic volatile methylsiloxane chosen among hexamethylcyclotrisiloxane, octamethylcyclotetrasiloxane, decamethylcyclopentasiloxane and dodecamethylcyclohexasiloxane.

35. (New) The composition as claimed in claim 33, wherein it is intended for topical application.

36. (New) The composition as claimed in claim 33, wherein it is in the form of a gel.

37. (New) The composition as claimed in claim 33, wherein it has a water content of less than or equal to 5%, in particular less than or equal to 3% by weight relative to the total weight of the composition, and in particular equal to zero.

38. (New) The composition as claimed in claim 33, wherein said active ingredient is solubilized using at least one solvent agent.

39. (New) The composition as claimed in claim 33, wherein it comprises at least one silicone agent, a hydrocarbon-based compound, in particular of pasty or solid type, an active ingredient in a solubilized form, and an alcohol-type solvent.

40. (New) The composition as claimed in claim 33, characterized in that said active ingredient is chosen from vitamin D and its derivatives.

41. (New) The composition as claimed in claim 33, wherein said active ingredient is present at a content of from 0.0001 to 20%, in particular from 0.01 to 15%, and more particularly from 0.025 to 5% by weight relative to the total weight of the composition.

42. (New) The composition as claimed in claim 38, wherein said solvent agent is chosen from alcohols such as ethanol.

43. (New) The composition as claimed in claim 38, wherein the content of solvent agent is from 1% to 50%, in particular from 2% to 40%, and more particularly from 5% to 10% by weight relative to the total weight of the composition.

44. (New) The composition as claimed in claim 33, wherein the content of elastomer is from 1% to 20%, and in particular from 4% to 12% by weight relative to the total

weight of the composition.

45. (New) The composition as claimed in claim 33, wherein the elastomer is formulated in at least one volatile silicone oil.

46. (New) The composition as claimed in claim 45, wherein said volatile silicone oil is chosen from linear or cyclic polyorganosiloxane oils having from 2 to 10 silicon atoms.

47. (New) The composition as claimed in claim 33, wherein the content of silicone agent is from 20% to 80%, and in particular from 30% to 70% by weight relative to the total weight of the composition.

48. (New) The composition as claimed in claim 33, wherein said thickening agent is chosen from solid or pasty hydrocarbon-based compounds.

49. (New) The composition as claimed in claim 39, wherein the hydrocarbon-based compound is chosen from hydrocarbon-based waxes of animal, plant, mineral or synthetic origin, and mixtures thereof.

50. (New) The composition as claimed in claim 49, wherein said hydrocarbon-based wax is chosen from glyceryl esters of saturated, unsaturated and in particular polyunsaturated fatty acids having from 10 to 24 carbon atoms.

51. (New) The composition as claimed in claim 50, wherein said wax is chosen from glyceryl behenate and glyceryl dipalmitostearate, and mixtures thereof.

52. (New) The composition as claimed in claim 39, wherein said hydrocarbon-based compound is present at a content ranging from 2% to 80%, and in particular from 4% to 30% by weight relative to the total weight of the composition.

53. (New) The composition as claimed in claim 39, wherein said composition has occlusive properties.

54. (New) The composition as claimed in claim 33, wherein it also comprises at least one agent for diluting the silicone agent.

55. (New) The composition as claimed in claim 54, wherein said diluting agent is chosen from linear or cyclic volatile silicone oils.

56. (New) The composition as claimed in claim 33, wherein it also comprises at least one agent for promoting the penetration of the active ingredient into the skin.

57. (New) The composition as claimed in claim 56, wherein said agent for promoting the penetration of the active ingredient into the skin is chosen from glycols, glycol ethers, fatty acids, fatty acid esters, glycol esters, glycerides, azones, polysorbates, alkanols, dimethyl sulfoxide, and mixtures thereof.

58. (New) The composition as claimed in claim 56, wherein said agent for promoting the penetration of the active ingredient into the skin is present at a content ranging from 2% to 30%, and in particular from 4% to 25% by weight relative to the total weight of the composition.

59. (New) The composition as claimed in claim 33, wherein it also comprises at least one pharmaceutically acceptable additive.

60. (New) A method for preparation of an anhydrous pharmaceutical composition comprising at least one active ingredient in a solubilized form and with prolonged stability, comprising combining said active ingredient, at least one organopolysiloxane elastomer and a thickening agent different from said silicone agent.

61. (New) A method for the preparation of an anhydrous pharmaceutical composition comprising at least one active ingredient in a solubilized form and with prolonged stability comprising combining said active ingredient and a silicone agent as defined in claim 34.

62. (New) The method as claimed in claim 60 wherein said silicon agent is the content of elastomer is from 1% to 20%, and in particular from 4% to 12% by weight relative to the total weight of the composition.

63. (New) The use as claimed in claim 60 wherein said composition is an anhydrous pharmaceutical composition combining at least one active ingredient and a silicone agent comprising at least one organopolysiloxane elastomer and a thickening agent different from the silicone agent, said active ingredient being in a solubilized form in said composition.

64. (New) A method for the treatment of psoriasis, comprising administering to a subject requiring treatment of psoriasis a composition as claimed in claim 33.
